

## **SATURN SEXTILE NATAL MIDHEAVE**

As transiting Saturn moves through the Zodiac, it challenges us, it teaches us valuable life lessons and then tests us. Things may not move along as you might want them to, taking longer to reach goals or to get action.

With transiting Saturn sextile natal MC (Midheaven or Medium Coeli), the energies and lessons are often directly related to your career, your life's status, your goals and aspirations.

Although the Sextile (a 60° aspect) is considered a favorable aspect, it still requires work because of Saturn's connection, and it requires dedication and continued effort from you. You must be reliable, steady, structured in your approach, although the working environment or your career might be subject to some challenging conditions. This may affect your status in life as some individuals will find this energy difficult; and because of this, it can put strain on any partnerships that have been formed, especially with the spouse.

There may be setbacks with goals until Saturn is outside its influence on your MC, (which is approximately 4° separating). Saturn is often at its peak when it has passed the natal position which in this case will be your MC by 2°. No other planet has this delayed effect, and other planets will be at their peak when direct.

With Saturn sextile natal MC, there is a potential opportunity although it will take more work than might be expected. Keep an open mind, with a positive attitude, and over time things may work out favorably. You must make this happen, however, as it will not happen by itself. Persistence, patience, learning lessons of significance and perseverance are necessary to make this work in your favor.

Do not give up even though things seem not to be working the way you want them to work. Over time, the results will prove to be beneficial to you in some manner. A positive perspective is a requirement.
